

ICM Union Poll for the Sunday Telegraph

Fieldwork dates: 5-6th December, 2007

Interview Method: Telephone, unless otherwise stated.

Population effectively sampled: All adults aged 18+

Sampling Method: Within each government office region a random sample of telephone numbers was drawn from the entire BT database of domestic telephone numbers. Each number so selected had its last digit randomised so as to provide a sample including both listed and unlisted numbers.

Sample size: 869 in England. Additional interviews on some questions in Scotland and Wales unreported.

Data weighting: Data were weighted to the profile of all adults aged 18+ (including non telephone owning households). Data were weighted by sex, age, social class, household tenure, work status, number of cars in the household and whether or not respondent has taken a foreign holiday in the last 3 years. Targets for the weighted data were derived from the National Readership survey, a random probability survey comprising 34,000 random face-to-face interviews conducted annually.

The data were further weighted by declared votes in the 2005 general election. The weighting scheme is designed as follows:

Questions: The computer tables attached in PDF format show each question, in full, in the order they were put to respondents, all response codes and the weighted and un-weighted bases for all demographics and other data including but not limited that published .

Voting figures: The vote intention cross break in this poll was included for analysis purposes only. ICM's usual vote intention questions were not asked.
